

# Exam Project

Deliver date	Wiseflow
Schedule	Wiseflow
Handin	<b>ZIP</b> with your code
Report	<b>PDF</b> and 10 pages (blank is perfect)
No hand-in (ZIP and PDF) no exam	

During the first 5 to 7 minutes of the exam, you will show your project. The project must fulfill the requirements or the exam cannot take place and you will get a 00.

During the first 5 to 7 minutes of the exam, you could be asked to show mandatory # 1 and exam questions could also be related to that mandatory assignment.

## Login No AJAX

email and password must match, not just the email

break if the match is found

use SESSIONS to keep the ID of the user who is logged

## Logout No AJAX

destroy the session

Logout is just a bridge

## Signup

A user can sign-up. Remember that the password cannot be plain text, so you must hash it.

## Tweet page (create tweet) Full with AJAX

A tweet belongs to a user and the tweet has a unique ID. This option allows a user to "tweet".

Note that the user can only tweet if logged. A tweet from the user belongs to the user, so your file must reflect that. Eg:

```
{
  "id":1,
  "name":"A",
  "email":"a@a.com",
  "password":"fgfgt564564565y",
  "tweets":[
    {"id":1,"title":"Tweet A", "body":"Message of tweet A", "active":1},
    {"id":2,"title":"Tweet B", "body":"Message of tweet B", "active":1}
  ]
}
```

### **See tweets Full with AJAX**

The shown tweets are the ones that belong to a user  
The ID comes from the SESSION

### **Delete tweets Full with AJAX**

Delete a tweet by its ID  
NOTE: The tweet ID and the user ID must match  
The user's ID comes from a SESSION

### **Updates tweets Full with AJAX**

Update a tweet by its ID  
Note: The only person who can update a tweet is the one who owns it  
The ID of the person who owns it is in the SESSION

### **It has to "look" like twitter**

Make it look good, as good as possible. This is part of mandatory # 1.  
We have covered CSS properties during the class and there is a link to CSS GRID in the document "things we do in the class".  
The better it looks, the more chances of getting a job when you show it in the job interview

### **AJAX**

Many parts of the system must be AJAX based. For example: create a tweet, delete a tweet, update a tweet  
Some parts do not need to use AJAX. For example: logout, login, signup
